(54) PRODUCTION OF POWDERY PREPARATION FOR INHALATION

(57) Abstract:

PROBLEM TO BE SOLVED: To easily produce a powdery preparation for inhalation having high transport factor to the lung and good discharging property from an inhalator in the case of using a dry powder inhalator for inhalation.

SOLUTION: The process for the production of a

powdery preparation for inhalation with a dry powder inhalator contains (a) a step to mix a drug (excluding an azulene derivative having thromboxane antagonistic action) with an assisting substance and mixing and pulverizing the mixture in the form of fine particles e.g. in a high-speed air flow and (b) a step to mix the fine particle mixture with carrier particles composed of sugars, sugar alcohols, amino acids, etc.
